of data visualization with the help of dimension reduction. The most understandable The most understandable image of data can be obtained from its presentation on two-dimensional picture.

Visualization of Multidimensional Data

A visualization of three-dimensional incompressible flows by divergence-free quasi-two-dimensional projections of velocity field on three coordinate planes is proposed. It is argued that such divergence-free projections satisfying all the velocity boundary conditions are unique for a given velocity field. It is shown that the projected fields and their vector

graphing two and three dimensional data sets. We shall introduce only the main features in this class, helpdesk and the book matlab guide, provide further in-depth information about the many different plotcommands in matlab. 6.1 Two dimensional plots We have already introduced the basic plot and plot3 commands for dot-to-dot plots of two and three dimensional vectors, however, you can change ...

The results of preoperative surgical evaluation of trachea stenosis based on two-dimensional CT-data or diagnostic tracheoscopy differed from histopathologic findings. In all cases stenosis was ...

Three-dimensional visualisation of CT-data for surgical

The article presents a method for the visualization of such a graph. The graph is first projected to three-dimensional space with parallel projection and the image "the surface in three-dimensional space" is rendered on the screen in the usual way. The visualization can be improved in two ways: the graph can be rotated in four-dimensional space or the direction line of the projection can be changed, which means that the observer flies around the graph in four dimensions. The animation and ...
