Neuromorphic engineering, also known as neuromorphic computing, is a concept developed by Carver Mead, in the late 1980s, describing the use of very-large-scale integration (VLSI) systems containing electronic analog circuits to mimic neuro-biological architectures present in the nervous system. In recent times, the term neuromorphic has been ...

Summary In this talk I begin noticing that while ignoring the crucial role of temporal coherence, the formulation of most of nowadays current computer vision recognition tasks leads to tackle a problem that is remarkably more difficult than the one nature has prepared for humans.
